

Open in a New Browser Window

Make an Oracle *Text Item* link open a new browser window. Oracle provides a method to make *File Items* open in a new browser window. But it takes additional tweaking to get a *Text Item* to open a in new browser window.

Open the text Item in HTML Mode

Add to the link (URL):

Just add a little something to the end of the URL.

Type this *within* the “Anchor” (a href) tag.

```
target="_blank"
```

Example:

The linked text would look like this:

Visit the [CDC](#) for the full story.

The link would be written like this:

```
Visit the <a href="http://www.cdc.gov/" target="_blank">CDC</a>  
for the full story.
```

Particular to Oracle:

When you type or paste this in HTML mode Oracle will remove the quotes around the original URL—you should replace them. (Note the missing quote marks.)

```
Visit the <a href=▼http://www.cdc.gov/▼ target="_blank">CDC</a> for the  
full story.
```
